MAIN FEATURES

• Embedded data logger : up to 1 million data points (with events dating)

• Excellent radio link relying on the radio antenna diversity developed by Beanair®

• Wireless accelerometer dedicated to shock  
Scalable measurement range :  
±6g/±12g/±24g or ±2g/±4g/±8g

• SSD (Smart Shock Detection), wireless sensor can wakeup on shock detection (software configurable)

• Waterproof IP67 casing (Nema 6)

• Integrated Lithium-Ion battery charger

APPLICATIONS

Test and Measurement

Structural Health Monitoring

Condition Monitoring

SMART SHOCK DETECTION TECHNOLOGY

The **BeanDevice® 2.4GHz AX-3DS** integrates a smart shock detection technology which permits to detect & recognize a shock event during the sleeping or deep sleeping mode of the **BeanDevice® 2.4GHz AX-3DS**. When the **BeanDevice® 2.4GHz AX-3DS** is in sleeping mode, the accelerometer continues to track a shock event with a power consumption of 68 uA in sleeping mode and 28uA in deep sleeping mode. A hysteresis on the shock event, fully configurable through the **BeanScope® 2.4GHz**, allows to avoid false alarm.

**EXAMPLE :** THIS CURVE SHOWS TWO SHOCK EVENTS, ONE CONSIDERED AS SIGNIFICANT (REAL ALARM) AND ANOTHER CONSIDERED AS NOT SIGNIFICANT (FALSE ALARM).

$\Delta d$  : shock detection hysteresis.

$\Delta t$  : Observed duration

If  $\Delta t = \Delta d$ , the shock event is detected and recognized, the BeanDevice® wakes up and start data sampling in “streaming mode”.

The following tables show the accelerometer sampling rate and the hysteresis time value in deep sleeping mode and sleeping mode of the BeanDevice® 2.4GHz AX-3DS.

Accelerometer sampling rate during deep sleeping mode (in HZ)	$\Delta d$ max value(s)	Resolution
0.5	128 s	2 s
1	64 s	1 s
2	32 s	500 ms
5	12.8 s	200 ms
10	6.4 s	100 ms

Accelerometer sampling rate during deep sleeping mode (in HZ)	$\Delta d$ max value(s)	Resolution
50	1.28 s	20 ms
100	640 ms	10 ms
400	160 ms	2.5 ms
1000	64 ms	1 ms

REMOTE CONFIGURATION & MONITORING

BeanScape® 2.4GHz Basic

The BeanScape® 2.4GHz application allows the user to view all the data transmitted by the BeanDevice® 2.4 GHz AX-3DS. With the OTAC (Over-the-Air configuration) feature, the user can remotely configure the V

SEVERAL DATA ACQUISITION MODES ARE AVAILABLE ON THE BEANDEVICE® 2.4 GHz AX-3DS :

- **Low Duty Cycle Data Acquisition mode (LDCDA)** : the data acquisition is immediately transmitted by radio. The transmission frequency can be configured from 1s to 24h.
- **Survey Mode**: the measured value is transmitted by radio whenever an alarm threshold (fixed by the user) is detected (4 alarms threshold levels High/Low). Meanwhile, the device sends frequently a beacon frame informing its current status.
- **Streaming Packet Mode** : all measured values are transmitted by packet within a continuous flow at 3 ksps/s maximum

## BeanDevice® 2.4GHz AX-3DS

### REMOTE CONFIGURATION & MONITORING

#### BeanScape® 2.4 GHz Premium+

The **BeanScape® 2.4GHz Premium+** integrates an OPC DA server (Data Access). OPC DA is particularly well suited for real time measurement and data sharing.

Each data/measurement can be associated to a tag or its attributes and shared with one or many OPC clients.

For further information about the different data acquisition modes:  
TN-RF-008 – “Data acquisition modes available on the BeanDevice®”

### ANTENNA DIVERSITY

While the vast majority of wireless IIOT sensors show their limits in harsh industrial environment, the **BeanDevice® 2.4GHz AX-3DS** integrates an innovative antenna diversity design, boosting the radio link quality in environments subject to random and diverse disturbances. Antenna Diversity improves both the quality and reliability of a wireless link by 30%.

### EMBEDDED DATA LOGGER UP TO 1 MILLION DATA POINTS

The **BeanDevice® 2.4GHz AX-3DS** integrates an embedded data logger, which can be used to log data when a wireless IIOT sensors can not be easily deployed on your site. All the data acquisition are stored on the embedded flash and then transmitted to the **BeanGateway® 2.4 GHz** when a wireless IIOT sensors is established.

The data logger function is compatible with all the data acquisition mode available on your **BeanDevice® 2.4 GHz AX-3DS** :

- LowDutyCycle Data Acquisition
- Survey
- Shock detection
- Streaming packet

IoT **BeanDevice® 2.4GHz AX-3DS**

EXAMPLE : SHOCK DETECTION ON A TRAIN

**Train Running**

Datalogger function is enabled on the :

**BeanDevice® 2.4GHz AX-3DS**

- In standalone operation, the **BeanDevice® 2.4GHz AX-3DS** stores all the measurements on its embedded datalogger. Thus, a direct connection with the **BeanGateway® 2.4GHz** is not needed.
- When the train is moving, all the acquired measurements are stored on datalogger.
- Data logs can be transmitted to the **BeanGateway® 2.4GHz** on request. Once a successful transmission is done, the user can choose to erase automatically the logs from the datalogger memory, so new ones can be stored.
